BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problems Mailbox.

US-09-955-502-14

Sequence 14, Application US/09955502

Patent No. US20020072118A1

GENERAL INFORMATION:

APPLICANT: Gralnick, Jeff A.

TITLE OF INVENTION: Method for Preventing Superoxide Damage to

TITLE OF INVENTION: Oxygen-Labile Proteins

FILE REFERENCE: 960296.97559

CURRENT APPLICATION NUMBER: US/09/955,502

CURRENT FILING DATE: 2001-09-18

PRIOR PPLICATION NUMBER: 60/234,588

PRIOR FILING DATE: 2000-09-22

NUMBER OF SEQ ID NOS: 33

SOFTWARE: Patentin Ver. 2.1
US-09-955-502-13

Sequence 13, Application US/09955502

Patent No. US20020072118A1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ţ,
                                                                                                                                                                Sequence 6, Application US/09955502
Patent No. US20020072118A1
GENERAL INFORMATION:
APPLICANT: Downs, Diana M.
APPLICANT: Grainick, Jeff A.
TITLE OF INVENTION: Method for Preventing Superoxide Damage
TITLE OF INVENTION: Oxygen-Labile Proteins
FILE REFERENCE: 960296.97559
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 87;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 10, Application US/09955502
Patent No. US20020072118A1
GENERAL INFORMATION:
APPLICANT: Downs, Diana M.
APPLICANT: Gralnick, Jeff A.
TITLE OF INVENTION: Method for Preventing Superoxide Damage to Cells
TITLE OF INVENTION: Oxygen-Labile Proteins
FILE REFERENCE: 960296.97559
CURRENT APPLICATION NUMBER: US/09/955,502
CURRENT FILING DATE: 2001-09-18
PRIOR APPLICATION NUMBER: 60/234,588
APPLICANT: Gralnick, Jeff A.

Sequence 26, Application US/0995502

GENERAL INFORMATION:

APPLICANT: Downs, Diana M.

TITLE OF INVENTION: Method for Preventing Superoxide Damage to TITLE OF INVENTION: Oxygen-Labile Proteins

FILE REFERENCE: 960296.97559

CURRENT APPLICATION NUMBER: US/09/955,502

CURRENT FILING DATE: 2001-09-18

PRIOR APPLICATION NUMBER: 60/234,588

Sequence 32, Application US/09955502

Sequence 32, Application US/09955502

GENERAL INFORMATION:

APPLICANT: Downs, Diana M.

TITLE OF INVENTION: Method for Preventing Superoxide Damage to TITLE OF INVENTION: Oxygen-Labile Proteins

FILE REFERENCE: 960296.97559

CURRENT APPLICATION NUMBER: US/09/955,502

CURRENT FILING DATE: 2001-09-18

PRIOR FILING DATE: 2000-09-22

NUMBER OF SEQ ID NOS: 33

SOFTWARE: Patentin Ver. 2.1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
Sequence 4, Application US/09955502

| Sequence 4, Application US/09955502
| Patent No. US20020072118A1
| GENERAL INFORMATION:
| APPLICANT: Downs, Diana M. |
| APPLICANT: Gralnick, Jeff A. |
| TITLE OF INVENTION: Method for Preventing Superoxide Damage to |
| TITLE OF INVENTION: Oxygen-Labile Proteins |
| CURRENT FILING DATE: 2001-09-18 |
| PRIOR APPLICATION NUMBER: 60/234,588 |
| PRIOR FILING DATE: 2000-09-22 |
| NUMBER OF SEQ ID NOS: 33 |
| SOFTWARE: PatentIn Ver. 2.1 |
| SEQ ID NO 4 |
| LENGTH: 86 |
| TYPE: PRT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GENERAL INFORMATION:

Sequence 1, Application US/0995502
Patent No. US20020072118A1
GENERAL INFORMATION:
APPLICANT: Downs, Diana M.
APPLICANT: Gralnick, Jeff A.
TITLE OF INVENTION: Method for Preventing Superoxide Damage to Cells and TITLE OF INVENTION: Oxygen-Labile Proteins
FILE REFERENCE: 960296.97559
CURRENT APPLICATION NUMBER: US/09/955,502
CURRENT FILING DATE: 2001-09-18
PRIOR FILING DATE: 2000-09-22

A; Title: The complete genome sequence of Escherichia coli K-1
A; Reference number: A64720; MUID: 97426617; PMID: 9278503
A; Accession: H64959
A; Status: nucleic acid sequence not shown; translation not sh
A; Molecule type: DNA
A; Residues: 1-569 <BLAT>
A; Residues: 1-569 <BLAT>
A; Experimental source: strain K-12, substrain MG1655
C; Genetics:
A; Start codon: TTG
C; Keywords: transmembrane protein
F; 30-46/Domain: transmembrane #status predicted <TM2>
F; 363-379/Domain: transmembrane #status predicted <TM2>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 18
S77102
hypothetical protein slr1865 - Synechocystis sp. (strain PCC 6803)
C; Species: Synechocystis sp.
A; Variety: PCC 6803
C; Species: Synechocystis sp.
A; Variety: PCC 6803
C; Accession: S77102
R; Kaneko, T.; Sato, S.; Kotani, H.; Tanaka, A.; Asamizu, E.; Nakamura, Y.; O, K.; Okumura, S.; Shimpo, S.; Takeuchi, C.; Wada, T.; Watanabe, A.; Yame DNA Res. 3, 109-136, 1996
A; Title: Sequence analysis of the genome of the unicellular cyanobacterium S.
A; Reference number: S74322; MUID:97061201; PMID:8905231
A; Accession: S77102
A; Residues: 1-420 < KAN>
A; Molecule type: DNA
A; Residues: 1-420 < KAN>
A; Rossidues: 1-420 < KAN>
A; Note: the nucleotide sequence was submitted to the EMBL Data Library, Ju C; Genetics:
A; Start codon: GTG
